Abstract

The networking website is an online community designed to make the social life of students more active and stimulating. The social network can help you maintain existing relationships with people and share pictures and messages, and establish new ones by reaching out to people you've never met before. This website also provides the features of blogging all at one place. The main idea behind blogging is to share your thoughts with all your friends which can be read by all the users using the website. This blog can be handled by the user as he wants for example adding videos and photos also. This website enhances Advertisements of products. People using this website can buy and sell products from this website. The main purpose behind this advertisement function is to help people to buy products which are trusted in their circle

Scope

This is the age of contacts for interaction between people to people through social platforms on the web. The tremendous popularity of using social media networking could never have been realized before. In fact, social media has become an important tool of marketing in the true sense of customer orientation. The scope of social networking is widening, and today it offers a strong support to the companies in providing the much desired touch of concern. Future of social media networking brings exciting promises as expected from the experience of limited users from a few companies in the top bracket. The bright future prospect of social networking is also proven with the fact that the technology is integrated in the mobile phones as well.

● Functional Requirements:

- Must have a valid user id and password to login
- New users can create accounts through the signup page
- A user is not allowed to have 2 accounts
- A user is able to edit his account details and can post photos alongside with captions
- A user can find friends and send them requests and if the request is accepted they will be able to see what their friends have posted
- A user can also make a private post if the user wishes no one to be able to see it

● Non Functional Requirements:

- Scalability
- Speed
- Data security
- Data integrity
- Encryption
- Authentication

● Description of modules:

- **Index.php:** This module starts the session. If the correct user ID and password are entered then the user is redirected to home.php. For new users it provides an option for creating a new account and when the account is created successfully, it redirects the user to home.php.
- **Home.php:** After successfully logging in, the first page that appears is the home page containing a navigation bar on top which consists of a search palette, friends, profile, friend requests and logout. Home page also shows the posts the user and the active friends have posted.
- **Friend.php:** It shows the list of friends and by clicking on a tab the user is redirected to the profile the user clicked on
- **Profile.php:** It shows the user profile and lets the user edit it.
- **Request.php:** It shows friend requests received and lets the user accept or ignore it and redirects to the request page.
- **Search.php:** It provides the user with options on how to search for someone and be able to send them a request. It provides 4 ways email, name, hometown and post as a search option. It makes use of SQL to search through different databases and returns the favourable choices.
- **Logout.php:** It ends the session and redirects to login page
- **Navbar.php:** It is used to include a navigation bar in the website
- **Post_picture.php:** It provides the account with a default display picture based on gender
- **Post.php:** It enables the user to make a post, the post is then saved in a table using sql and can or cannot be viewed by the user's friends depending on whether the user chooses it to be public or not.
- **includes/profile.php:** It inputs the user data into tables using php and SQL
- **Userquery.php:** If the search is invalid then it notifies the search.php of the inexistence of the keywords entered by the user.
- **Functions.php:** It connects the webpage to the database
- **Upload.php:** It checks whether the posted file is supported or not.

Tools and technologies

This project is developed using web programming and its components like HTML, CSS, JAVASCRIPT, SQL and PHP. The project is developed to overcome the barrier between the modern form of communication.

Tools required to developed the application:

HTML: It defines the content of the application.

CSS: It specifies the layout of the application. The styling of the application like you see in the Login and Register page is done using CSS.

JavaScript: It is used to program the behavior of the application. This is used for authentication purposes in the application.

PHP: It is a server-side language. Connect the webpages to the database.

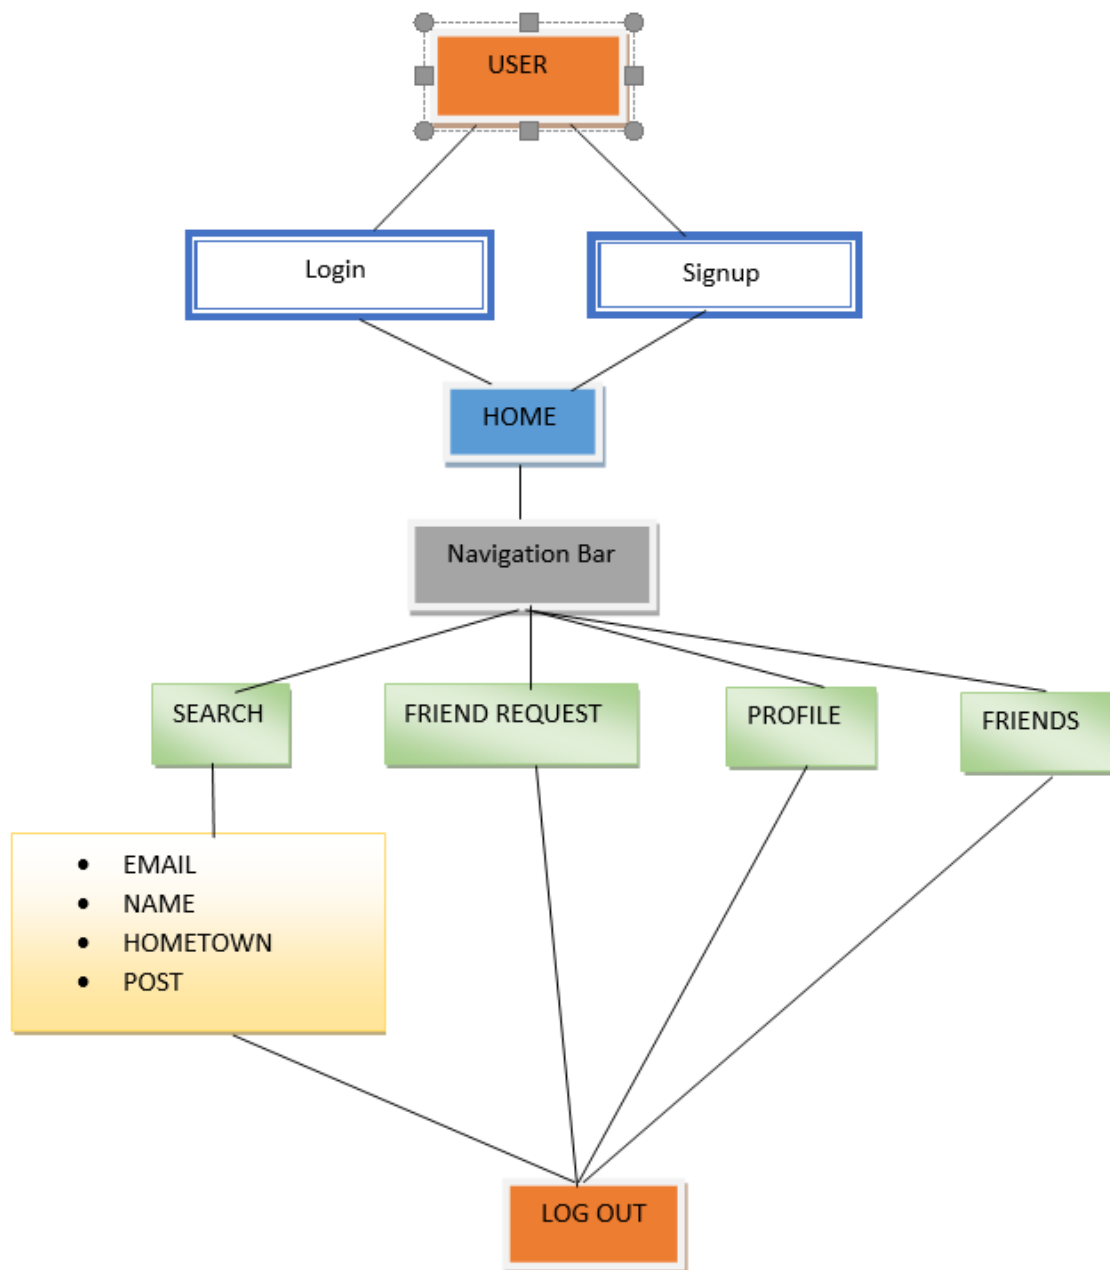

SQL: Used to create database and store data received from clients in form tables

XAMPP: Provides a platform to use php and MySQL.

Web Browser: A web browser (commonly referred to as browser) is a software application for retrieving, presenting and traversing information resources on the World Wide Web.

Pc/System: All operations are performed on this device. It falls under the category of hardware requirements required for carrying out the project.

Design of project

Implementation details

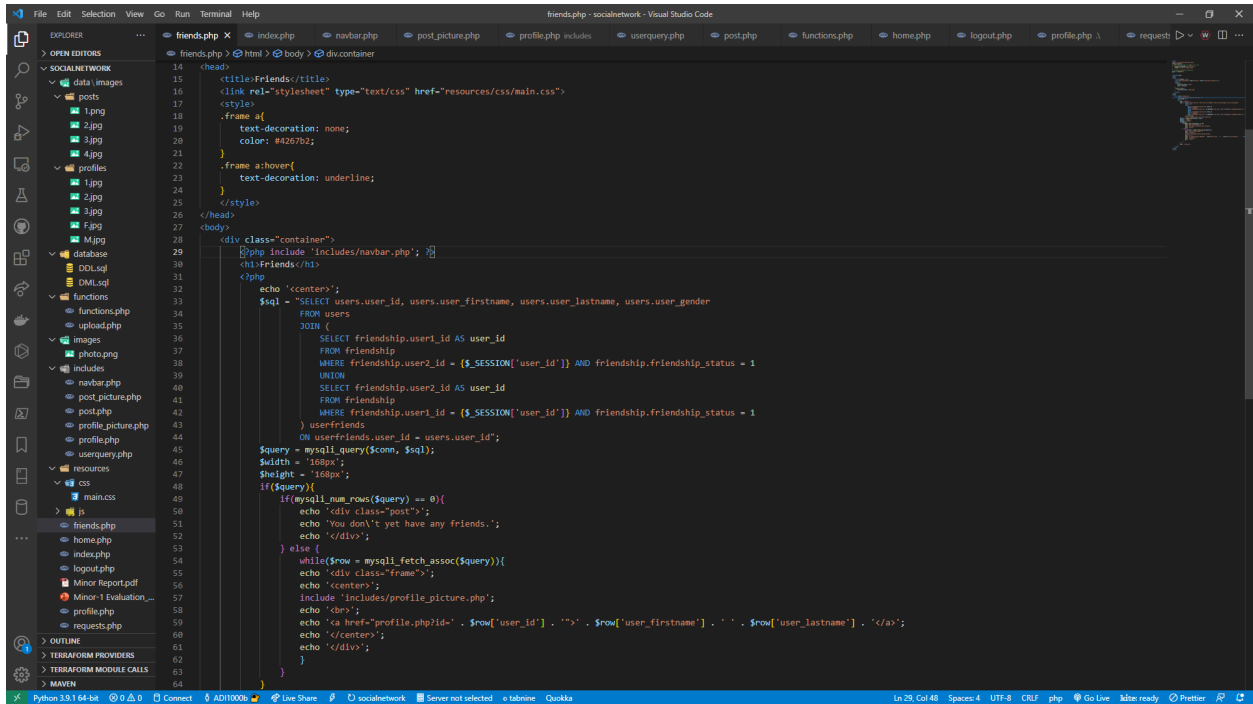

```

</head>
<body>
    <div class="container">
        <?php include 'includes/navbar.php'; ?>
        <br>
        <div class="createpost">
            <form method="post" action="" onsubmit="return validatePost()" enctype="multipart/form-data">
                <h2>Make Post</h2>
                <hr>
                <span style="float:right; color:black">
                    <input type="checkbox" id="public" name="public">
                    <label for="public">Public</label>
                </span>
                Caption <span class="required" style="display:none;"> *You can't Leave the Caption Empty.</span><br>
                <textarea rows="6" name="caption"></textarea>
                <center><img src="" id="preview" style="max-width:580px; display:none;"></center>
                <div class="createpostbuttons">
                    <!--<form action="" method="post" enctype="multipart/form-data" id="imageform">-->
                    <label>
                        
                        <input type="file" name="fileUpload" id="imagefile">
                        <!--<input type="submit" style="display:none;"-->
                    </label>
                    <input type="submit" value="Post" name="post">
                    <!--</form-->
                </div>
            </form>
        </div>
        <h1>News Feed</h1>
    </div>
    <?php

```

The screenshot shows the Visual Studio Code editor with the 'friends.php' file open. The Explorer sidebar on the left shows a project structure for 'socialnetwork' with folders like 'data', 'images', 'posts', 'profiles', 'resources', and 'css'. The main editor area displays the PHP code for 'friends.php', which includes HTML headers, CSS styles, and a PHP script that queries a database for user friends. The code is as follows:

```
14 <head>
15 <title>Friends</title>
16 <link rel="stylesheet" type="text/css" href="resources/css/main.css">
17 <style>
18 .frame a{
19     text-decoration: none;
20     color: #4267b2;
21 }
22 .frame a:Hover{
23     text-decoration: underline;
24 }
25 </style>
26 </head>
27 <body>
28     <div class="container">
29         <?php include 'includes/navbar.php'; ?>
30         <h1>Friends</h1>
31         <?php
32             echo 'center';
33             $sql = "SELECT users.user_id, users.user_firstname, users.user_lastname, users.user_gender
34                 FROM users
35                 JOIN (
36                     SELECT friendship.user1_id AS user_id
37                     FROM friendship
38                     WHERE friendship.user2_id = ({$_SESSION['user_id']}) AND friendship.friendship_status = 1
39                     UNION
40                     SELECT friendship.user2_id AS user_id
41                     FROM friendship
42                     WHERE friendship.user1_id = ({$_SESSION['user_id']}) AND friendship.friendship_status = 1
43                 ) userfriends
44                 ON userfriends.user_id = users.user_id";
45             $query = mysql_query($conn, $sql);
46             $width = "180px";
47             $height = "160px";
48             if($query){
49                 if(mysql_num_rows($query) == 0){
50                     echo <div class="post">;
51                     echo "You don't yet have any friends.";
52                     echo </div>;
53                 } else {
54                     while($row = mysql_fetch_assoc($query)){
55                         echo <div class="frame">;
56                         echo <center>;
57                         include "includes/profile_picture.php";
58                         echo <br>;
59                         echo <a href="profile.php?id= . $row['user_id'] . "' . $row['user_firstname'] . ' . $row['user_lastname'] . ">;
60                         echo </center>;
61                         echo </div>;
62                     }
63                 }
64             }
```

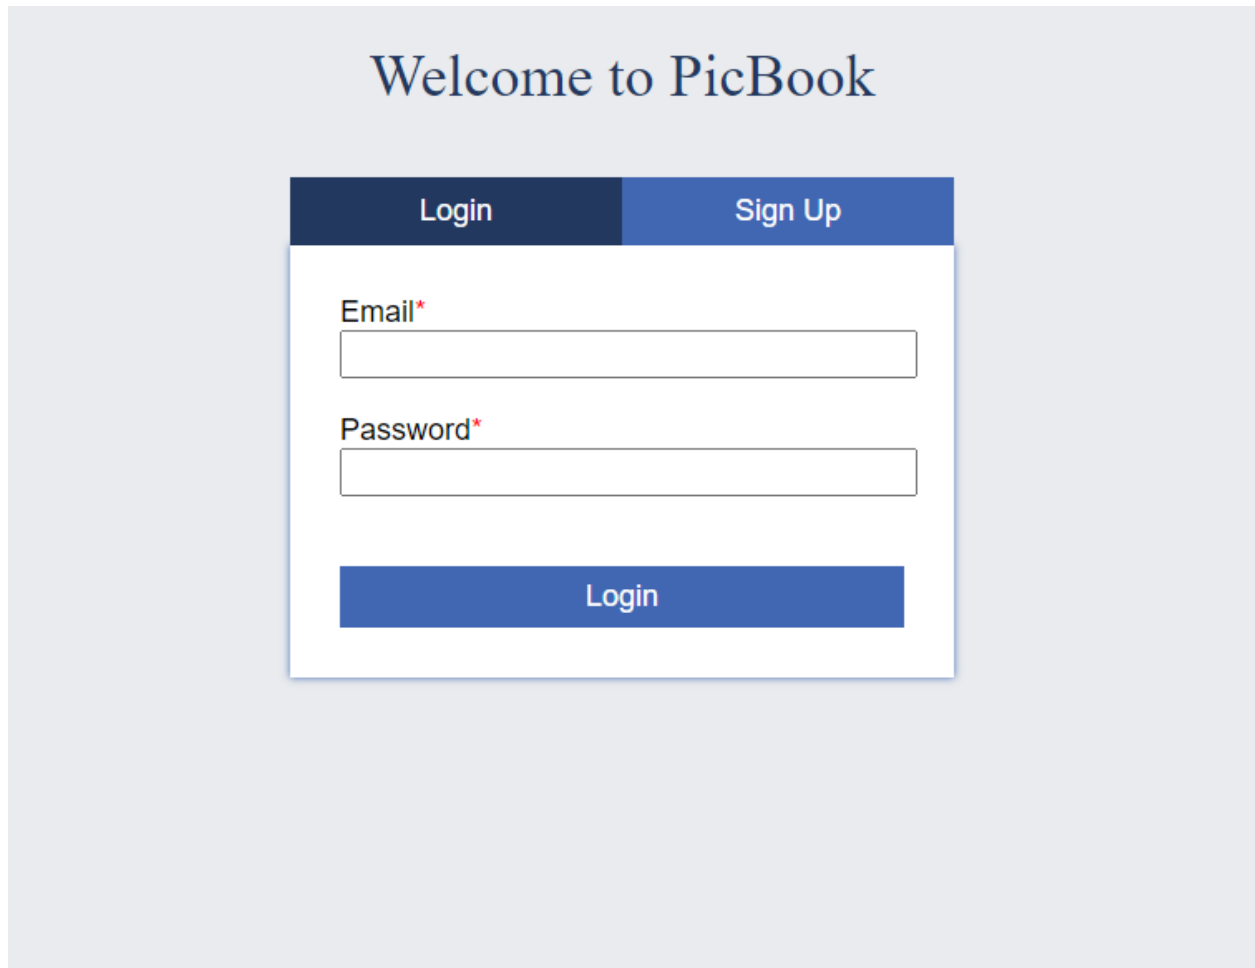

The screenshot shows the Visual Studio Code editor with the 'logout.php' file open. The Explorer sidebar on the left shows the same project structure as the previous image. The main editor area displays the PHP code for 'logout.php', which is a simple script to end a session and redirect the user to the index page. The code is as follows:

```
1 <?php
2 session_start();
3 session_destroy();
4 header("location:index.php");
5 ?>
```

For the entire source code of the project click on the link below

Screenshots and explanation:

The screenshot shows a web page titled "Welcome to PicBook". Below the title is a login form. The form has a header with two tabs: "Login" (dark blue) and "Sign Up" (blue). The "Login" tab is selected. The form contains two input fields: "Email*" and "Password*", both with red asterisks indicating required fields. Below the input fields is a blue "Login" button.

Mandatory fields are marked with an asterisk(*) and not filling any will show a message as shown above.

This is the home page where all the user's and their friends' posts are shown in chronological order from latest to oldest.

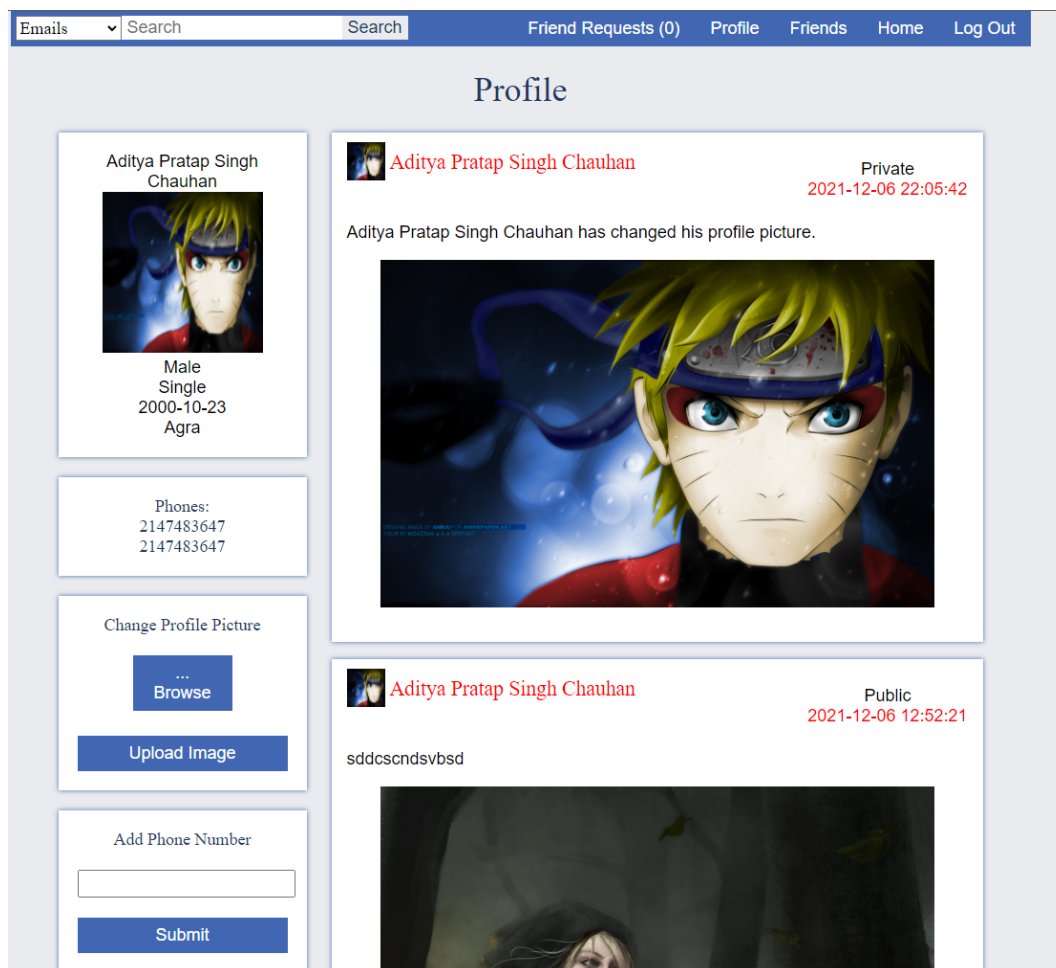

This is the search bar through which a user may search for friends it has different filter options as shown below.

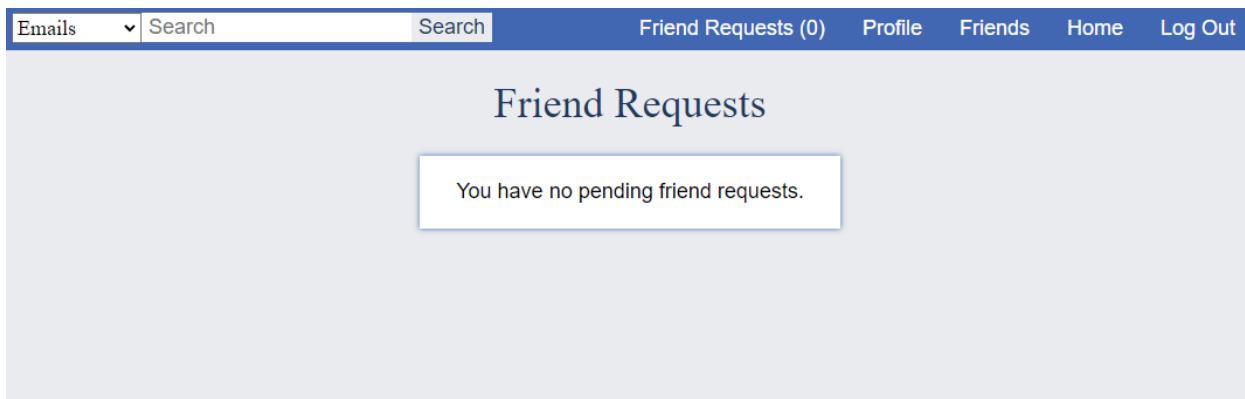

After searching for the above mail id the results will be shown as above.

This is the profile page of the user which shows all their posts and their details and also enables them to change their profile picture.

If the user wishes to see their friend list they can do so by clicking on the friends option in the navigation bar and they will be redirected to the page containing a list of their friends as shown above.

The above page shows the friend requests received by the user from this they can react to those requests.
